- Stronger structure
- Plastic reduction
- Cleaner after use

3Whys

TWN Technology

► Stronger chains
Maximum strength only where it is needed! The forces of the bale are contained by a reduced number of strong chains: a significant, further reduction in the amount of plastic used.

► Mesh with fewer knots
Knots are the critical points of any thread. Novatex TwN net wraps have half the number of knots with respect to standard net wraps.

► Easier to remove
The TwineNet weft has a much wider angle than traditional nets. It hooks up immediately to the surface of the bale and is easier to remove.

► Cleaner after use
The wider mesh facilitates removal from the bale and retains less forage residue. Simply shake the net firmly to get it perfectly clean.

► Ready for recycling
After use, TwineNet net wraps are cleaner from forage residues and immediately ready for recycling. For this reason, they should be placed in separate containers from conventional nets.

3Whys is the flagship product of TwineNet technology, a net wrap that revolutionizes normal baling standards. 3Whys concentrates extraordinary specific strength in just 15 chain threads, capable of easily tackling the most difficult harvesting situations, even in extreme environmental conditions.

Thanks to the particular shape of 3Whys mesh, the weft extends horizontally, offering exceptional grip on the bale. The surprising effect of 3Whys is at the moment of removal: the large meshes detach from the crop without holding it. A light shake is enough to obtain a clean mesh ready for recycling.

The new era for baling in the toughest conditions
